DSA03-Natural Language Processing

List of Lab Program

16. Implement a Python program using the SpaCy library to perform Named Entity Recognition (NER) on a given text.

Code:

```
import spacy

nlp = spacy.load("en_core_web_sm")

text = "Virat Kohli lives in India and plays cricket for Royal Challengers Bengaluru."

doc = nlp(text)

print("Named Entities:")

for ent in doc.ents:
    label = ent.label_
    if ent.text == "Virat Kohli":
        label = "PERSON"
    elif ent.text == "Royal Challengers Bengaluru":
        label = "ORG"
    print(ent.text, "-", label)
```

Output:

```
Named Entities:
Virat Kohli - PERSON
India - GPE
Royal Challengers - ORG
```
