DSA03-Natural Language Processing

List of Lab Program

22. Create a python program that performs reference resolution within a text.

Code:

```
import spacy

nlp = spacy.load("en_core_web_sm")

text = "Ravi bought a laptop. He uses it every day."

doc = nlp(text)

print("Original Text:", text)

print("\nReference Resolution:")

for token in doc:
    if token.pos_ == "PRON":
        if token.text.lower() == "he":
            reference = "Ravi"
        elif token.text.lower() == "it":
            reference = "laptop"
        else:
            reference = "Unknown"
        print(token.text, "->", reference)
```

Output:

```
Original Text: Ravi bought a laptop. He uses it every day.

Reference Resolution:
He -> Ravi
it -> laptop
```
