DSA03-Natural Language Processing

List of Lab Program

5. Use the Porter Stemmer algorithm to perform word stemming on a list of words using python libraries.

Code:

```
from nltk.stem import PorterStemmer

stemmer = PorterStemmer()

words = ["playing", "played", "plays", "running", "studies", "happiness"]

print(f"{'Original Word':<18}{'Stemmed Word':<18}")

print("-" * 36)

for word in words:

    stem = stemmer.stem(word)

    print(f"{word:<18}{stem:<18}")
```

Output:

```
Original Word     Stemmed Word
------------------------------------
playing           play
played            play
plays             play
running           run
studies           studi
happiness         happi
```
